The global Phase Change Grease market size is predicted to grow from US\$ 131 million in 2025 to US\$ 170 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

Phase change thermal conductive material has high thermal conductivity and stable thermal conductivity. Before use, it is a paste, but when all the diluents are completely volatilized, it becomes a solid at room temperature. Under working conditions, as the temperature rises, especially when the temperature reaches above its phase change temperature, it becomes a semi-solid substance that can flow, can wet the two interfaces well, greatly remove the air between the interfaces, reduce the interface contact thermal resistance, and show excellent heat dissipation performance.

United States market for Phase Change Grease is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Phase Change Grease is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
