The production of phenolic extracts involves extracting phenolic compounds from plant sources, and various manufacturers may engage in this process.

Phenolic extracts have been widely used in the nutraceutical and health food manufacturing industries due to their antioxidant properties and health benefits. Phenolic extracts have been studied for pharmaceutical applications, including potential anti-cancer and anti-inflammatory efficacy. Some studies suggest that phenolic compounds may help prevent or treat some chronic diseases. Compounds in phenolic extracts are widely recognised as natural antioxidants that may help combat oxidative stress and protect cells from free radical damage. Because of their antioxidant and anti-inflammatory effects on the skin, phenolic extracts are added to some cosmetic and personal care products to promote skin health. Research on phenolic extracts is still

ngoing to gain insight into their chemical composition and potential biological activities. Scientists' research on these compounds is expected to lead to more insights about their applications in health and medicine.
