Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Phenolic Foam Insulation Sheet market.

Phenolic foam insulation sheet is a closed-cell rigid foam made of phenolic resin, flame retardant, smoke suppressant, curing agent, foaming agent, and other auxiliary agents through scientific formula. The most prominent advantage is fire prevention and insulation.

Phenolic foam insulation sheet has excellent fire resistance. Organic thermal insulation materials such as polyurethane and polystyrene will produce dense smoke and highly toxic after burning, which is likely to cause death and increase the difficulty of extinguishing fire. The phenolic foam insulation sheet is non-flammable in fire, and its combustion performance is as high as Class A. The maximum use temperature is

180°C (allowing instantaneous 250°C). The flame resistance of 100 mm thick phenolic foam can reach more than 1 hour without being penetrated.
