Phenolic rubber antioxidants are a vital class of stabilizers that can be categorized into alkylated phenols, substituted monobasic phenols, polyhydric phenols, and sulfurized disubstituted phenols. Typical representatives include 2,2'-methylenebis(6-tert-butyl-4-methylphenol) (antioxidant 2246), 2,6-di-tert-butyl-4-methylphenol (BHT or antioxidant 264), and styrenated phenol (antioxidant SP). Among them, antioxidant 2246 offers excellent protection against rubber aging caused by heat, oxygen, and metal ions. While the phenolic antioxidants' efficiency is slightly lower than amine types due to hydrogen atoms readily reacting with atmospheric oxygen, their low discoloration effect makes them especially suitable for use in light-colored rubber products. As such, they are widely applied in rubber items requiring good appearance and stability, such as cables, medical rubber, and latex goods.

United States market for Phenolic Rubber Antioxidants is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
