The global Phenylketonuria Therapeutic market size is predicted to grow from US\$ 1234 million in 2025 to US\$ 2221 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

Phenylketonuria (PKU) is an inborn error of metabolism that results in decreased metabolism of the amino acid phenylalanine. Untreated PKU can lead to intellectual disability, seizures, behavioral problems, and mental disorder. It may also result in a musty smell and lighter skin. Babies born to mothers who have poorly treated PKU may have heart problems, a small head, and low birth weight.

The phenylketonuria (PKU) therapeutic market is primarily driven by the increasing prevalence of PKU and the growing demand for effective treatments to manage this rare genetic disorder. PKU is characterized by the inability to metabolize the amino acid phenylalanine, leading to its accumulation in the body, which can cause severe neurological and cognitive impairments if left untreated. As awareness about PKU and newborn screening programs improve, more patients are being diagnosed early, increasing the need for therapeutic interventions. However, the market also faces challenges, including the complexity of managing PKU through dietary restrictions and adherence to low-phenylalanine diets. This can be particularly challenging for young children and adults, impacting their quality of life and nutritional intake. Moreover, the limited availability of novel and more effective treatments for PKU poses a hurdle in addressing the unmet medical needs of patients. Addressing these challenges requires continued research and development of innovative therapies, including enzyme replacement therapies, gene therapies, and pharmacological interventions, to improve PKU management and alleviate dietary burdens. Additionally, raising awareness about PKU and its consequences among healthcare professionals and the general public is

essential to facilitate early diagnosis and access to appropriate therapeutic options, ultimately driving the growth of the phenylketonuria therapeutic market and improving patient outcomes.
