The global Phenylmagnesium Bromide market size is predicted to grow from US\$ 271 million in 2025 to US\$ 407 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Phenylmagnesium Bromide is a highly reactive organomagnesium compound belonging to the Grignard reagent family, widely used as a key intermediate in organic synthesis for forming carbon-carbon bonds and producing pharmaceuticals, agrochemicals, flavors and fragrances, dyes, specialty chemicals, and advanced materials. It is typically supplied as a solution in ethers such as tetrahydrofuran (THF) or diethyl ether due to its sensitivity to moisture and air. The supply chain begins with upstream raw materials including bromobenzene, magnesium metal, and anhydrous ether solvents, along with inert gases and specialized reaction equipment. Manufacturing involves the reaction of bromobenzene with activated magnesium under strictly anhydrous conditions to form Phenylmagnesium Bromide solution. Midstream activities include purification, concentration adjustment, quality control, packaging in moisture-resistant containers, and distribution through specialty chemical suppliers. Downstream users include pharmaceutical manufacturers, fine chemical producers, academic and industrial research laboratories, agrochemical companies, and custom synthesis organizations that utilize Phenylmagnesium Bromide as a versatile reagent for synthesizing alcohols, ketones, carboxylic acids, and numerous high-value organic compounds. In 2025, global Phenylmagnesium Bromide output was about 60,000 tons with 80,000 tons of capacity, average prices of USD 4,000-9,000 per ton, and gross margins around 26%.
