Phenylpyrazole is a member of the class of pyrazoles and is chemically related to broad-spectrum insecticides

Phenylpyrazole includes pesticides such as fipronil, ethiprole, and pyriprole. Phenylpyrazole was developed to combat increasing resistance from target insects against common pesticides. Fipronil is the first and most popular phenylpyrazole insecticide. Fipronil is used to treat many insects such as fleas, ants, and termites. It is also used in some brands of gel baits to kill cockroach infestations. For many years, fipronil was the only commercially available active ingredient in the phenylpyrazole class. More have made their way onto the market, such as products containing pyriprole and ethiprole. Phenylpyrazole is primarily used in agriculture, veterinary, and domestic pest control applications.
