The global PHEV Plastic Intake Manifold market size is predicted to grow from US\$ 72.70 million in 2025 to US\$ 126 million in 2032; it is expected to grow at a CAGR of 8.2% from 2026 to 2032.

PHEV plastic air-intake manifold is a thermoplastic air distribution component/module fitted on the ICE intake side of a plug-in hybrid vehicle. It routes throttle/boosted air evenly to cylinders and may integrate charge-motion valves, EGR ports, sensors, resonators and noise-attenuation features, delivering airflow efficiency, emissions compliance and NVH control under frequent start-stop and thermal cycling, while reducing mass and cost versus metal alternatives.

The upstream supply chain focuses on engineering plastic resin systems, glass fibers and additives, metal inserts/bushings, seals, and sensor interface components; the downstream market serves engine/hybrid powertrain manufacturers and Tier-1 suppliers of modular intake systems.

In 2025, global PHEV plastic intake manifold production reached approximately 4 million units, with an average global market price is between \$15 and \$20 per unit.
