## Abstracts

The global Phone Out-box Chargers market size is predicted to grow from US\$ 6740 million in 2025 to US\$ 9031 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Phone out-box chargers are charging devices sold separately through e-commerce platforms, operator channels, and offline retail networks, rather than being bundled with smartphones at shipment. They are designed to provide wired or wireless power supply for smartphones and related mobile devices. The product scope includes wired power adapters (USB-C/USB-A supporting mainstream fast-charging protocols such as USB PD, PPS, and QC) as well as wireless chargers based on Qi and Qi2 standards, including pad-type, stand-type, and magnetic designs. Technological evolution continues toward higher power output, smaller form factors, multi-port configurations, magnetic attachment, and increasing adoption of GaN-based solutions. Upstream raw materials and key components mainly include power semiconductor devices (silicon MOSFETs, rectifiers, and GaN devices), fast-charging and wireless-charging control chips, power-management ICs, magnetics (transformers, inductors, and wireless charging coils), passive components, PCBs, connectors and copper materials, as well as flame-retardant plastic housings, metal parts, and thermal materials. Downstream customers primarily consist of branded accessory manufacturers, e-commerce platforms, operator channels, and offline retailers, while end-user demand is driven by replacement, upgrades, multi-device usage, and growing preference for convenient and wireless charging experiences. Industry opportunities are mainly supported by the declining inclusion of in-box chargers, wider adoption of high-power fast charging and multi-device usage scenarios, increasing penetration of wireless charging in premium and magnetic ecosystems, and value enhancement through branding and product mix upgrades. In 2025, global capacity for phone out-box chargers is approximately 1.35

billion units, with shipments of about 1.06 billion units; the weighted average selling price is around US\$6.5 per unit, and the overall gross margin is about 23%, with wireless chargers and high-power GaN or multi-port wired products generally achieving higher profitability than the retail market average.
