Phosphite rubber antioxidants function as hydroperoxide decomposers and free-radical scavengers, serving as essential auxiliary antioxidants in polymer systems. Typical compounds include tris(nonylphenyl) phosphite (TNP), tris(1,2,2,6,6-pentamethylpiperidiny) phosphite (GW-540), and tris(2,4-di-tert-butylphenyl) phosphite (Irgafos168). GW-540 is widely used in tire formulations containing styrene-butadiene rubber and polybutadiene rubber, while TNP is suitable for natural rubber, synthetic rubber, latex, and plastic products. These phosphite antioxidants provide excellent thermal stability to rubber products and do not affect their color or gloss. When used in combination with phenolic or amine antioxidants, they significantly enhance the overall antiaging performance of rubber materials.
