A phospho-specific antibody is an antibody that specifically binds to the phosphorylation site of a phosphorylated protein. In cells, protein phosphorylation modification is an important post-transcriptional modification, which can regulate protein activity, stability, interactions, etc., and participate in the regulation of various biological processes. Phospho-specific antibodies have the ability to highly specifically recognize specific phosphorylation sites and can be used to detect and quantify the expression levels of phosphorylated proteins in samples, thereby revealing the activity and regulatory mechanisms of cell signaling pathways.

The global Phospho Specific Antibody market size is projected to grow from US\$ 692 million in 2024 to US\$ 1186 million in 2030; it is expected to grow at a CAGR of 9.4% from 2024 to 2030.
