The global Phosphorus Recovery and Harvesting System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Phosphorus is a non-renewable natural resource, and there is a global contradiction between the increasing shortage of terrestrial phosphate resources and the excessive phosphorus content in the water environment, leading to eutrophication of water bodies. Due to rapid population growth, demand for phosphorus is expected to increase by 50% to 100% by 2050. However, excess phosphorus in water bodies leads to eutrophication of water bodies, and strict regulations have been implemented on phosphorus discharge from natural water bodies around the world. Although phosphorus removal technology from wastewater was developed earlier, there are still some problems, including large sludge volume, accumulation of phosphorus in sludge, and struvite scaling. Therefore, recovering phosphorus from sewage or sludge can not only solve the scaling problem, but also alleviate the shortage of phosphorus resources and realize a circular economy of resource recycling.

Phosphorus Recovery and Harvesting System aims to recover and extract phosphorus from wastewater, sludge, agricultural waste and other resources through technical means, and convert it into a reusable form.

United States market for Phosphorus Recovery and Harvesting System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Phosphorus Recovery and Harvesting System is estimated to increase

from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
