The global Phosphorus Removal and Recovery Solutions market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Phosphorus Removal and Recovery Solutions refer to technologies and processes designed to remove excess phosphorus from wastewater or other water bodies and recover it for reuse. These solutions are critical for preventing eutrophication, which can cause harmful algal blooms and oxygen depletion in aquatic environments. They also help reclaim phosphorus, an essential nutrient for agriculture, from waste streams. Methods used in these solutions can include chemical precipitation, biological treatment, and advanced filtration techniques. The recovered phosphorus can be processed into fertilizers or other products, contributing to sustainable nutrient management and environmental protection.
