The global Phosphotungstic Acid Negative Staining Solution market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Phosphotungstic acid negative staining solution is suitable for displaying macromolecules, bacteria, viruses, protozoa, phages, organelles, nucleic acid macromolecules, protein crystals and other macromolecular materials. The image of the stained sample is transparent and bright, while the background image is black. Negative staining, also known as negative staining, is a staining technique discovered by Hall compared to ordinary staining (i.e. positive staining). The "mass-thickness" difference between the structures enhances the scattering-absorption contrast.
