## Abstracts

The global Photo-Imageable Solder Mask market size is predicted to grow from US\$ 1069 million in 2025 to US\$ 1428 million in 2031; it is expected to grow at a CAGR of 4.9% from 2025 to 2031.

Photo-imageable solder mask, often referred to as solder resist or solder mask, is a specialized protective coating applied to the surface of printed circuit boards (PCBs) during the PCB manufacturing process.

The global electronics manufacturing industry was experiencing substantial growth due to increased demand for consumer electronics, automotive electronics, IoT devices, and 5G technology. This growth had a direct impact on the solder mask market as PCBs are essential components of electronic devices. Environmental regulations and consumer demand for environmentally friendly products were driving the adoption of lead-free solder masks in PCB manufacturing. These masks comply with regulations such as the Restriction of Hazardous Substances (RoHS). The Asia-Pacific region, particularly China, remained a dominant force in the global solder mask market due to its significant role in electronics manufacturing.
