Photocoagulator is a type of semi-automatic pattern scan laser photocoagulation system designed to treat ocular diseases with the help of a single shot or predetermined pattern array. The device is for ophthalmologists, chiefly those that focus in vitreo-retinal surgery, which is an eye surgery. Photocoagulation is not used for tumours that involve the optic disc or fovea, as this technique would result in loss of central vision. In such cases, external beam radiation or chemoreduction are typically used.

The global market for Photocoagulator Devices is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Photocoagulator Devices market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
