The global Photoelectric Gyroscope market size is predicted to grow from US$ 2544 million in 2025 to US$ 3265 million in 2031; it is expected to grow at a CAGR of 4.2% from 2025 to 2031.

Photoelectric gyroscope is a device that uses optical principles to measure the angular velocity of rotation. Photoelectric gyroscopes measure the rotational motion of a vehicle based on modern physics effects, especially the optical Sagnac effect. It determines the angular velocity of rotation by measuring the phase difference of light, and has the characteristics of high precision, high sensitivity and fast response. Photoelectric gyroscopes are widely used in aerospace, aviation, navigation, automotive electronic stability systems, and smartphones. It can provide high-precision angular velocity measurement, provide accurate navigation and guidance for aircraft and missiles, and also play an important role in automotive electronic stability systems to help vehicles maintain stability. In addition, consumer electronics such as smartphones also use photoelectric gyroscopes to achieve functions such as attitude sensing.

United States market for Photoelectric Gyroscope is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
