Photoinitiator EHA is a liquid additive widely used in UV/LED curing systems. In industry, it is often sold under names such as Omnirad EHA or SpeedCure EHA. Strictly speaking, EHA is not a standalone primary photoinitiator in the narrow technical sense; it is more accurately classified as an amine synergist / co-initiator. When used together with Norrish Type II photoinitiators such as benzophenone-type materials, it helps generate free radicals, improves surface cure, and reduces oxygen inhibition in radiation-curable formulations. It is mainly used in UV-curable coatings, inks, adhesives, and related acrylate-based systems.
