The global Photomask Etch Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Photomask Etch Systems are equipment used to manufacture photomasks used in semiconductors and other microelectronic devices. This system is mainly used to accurately etch the desired patterns on the photomask to ensure that these patterns can be accurately transferred to the semiconductor wafer in the subsequent photolithography process. These patterns are usually formed by depositing a layer of photoresist on the substrate, then forming the pattern through exposure and development steps, and finally removing the unwanted parts through the etching step, leaving the desired pattern.
