Abstracts

The global Photon Emission Microscope(PEM) market size is predicted to grow from US$ 166 million in 2025 to US$ 239 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Light emission microscopy (PEM), also known as EMMI, is a microscope used to detect defects and failure points in semiconductor devices. It uses high-gain cameras or detectors to detect trace amounts of photons emitted by defects or failures in semiconductor devices, and locates the failure point through image processing technology. PEM is a new defect location analysis technology developed in the 1990s and has the characteristics of high sensitivity and high resolution. It can quickly and accurately locate device failure defects in a wide range, so it is widely used in device failure analysis.

In the upstream segment, key components include high-sensitivity detectors (such as InGaAs, Si-CCD, or sCMOS sensors), high-precision optical lenses, and filtering systems. Among these, the detector and optical module are the core technologies.Global sales in 2024 were approximately 180 units, with prices varying significantly depending on configuration, brand, and sourcing channels, ranging from approximately US$400,000 to US$1.3 million per unit. The industry's gross profit margin is between 30% and 50%.

With the continuous iteration of advanced integrated circuit manufacturing processes and the advancement of chip feature sizes into the nanometer scale, circuit density and complexity have increased dramatically. Precise and non-destructive localization analysis of subtle charge leaks and defect locations has become essential, making PEM (Programmable Image Processing) an irreplaceable core tool for non-destructive failure

analysis.The primary challenge lies in the extremely high cost of equipment and the significant technological barriers. High-performance PEM systems involve complex ultra-sensitive detectors, high-precision objectives, and proprietary image processing algorithms, which limits their primary users to a few large semiconductor companies and top-tier analytical laboratories.
