The global Photorefractive Crystals market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Photorefractive crystals are optical materials with the ability to change their refractive index in response to light exposure, enabling dynamic modulation of light beams and optical signals. These crystals exhibit nonlinear optical properties, such as photorefractivity and self-focusing effects, making them suitable for applications in holography, optical data storage, and beam steering devices. Photorefractive crystals can be used to manipulate and control light propagation, diffraction, and interference patterns with high sensitivity and optical efficiency.

United States market for Photorefractive Crystals is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Photorefractive Crystals is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Photorefractive Crystals is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
