The global Photovoltaic Cleaning Drone market size is predicted to grow from US$ 81.6 million in 2025 to US$ 197 million in 2032; it is expected to grow at a CAGR of 13.7% from 2026 to 2032.

Photovoltaic Cleaning Drone is an aerial device designed to clean solar modules by spraying water or cleaning agents and using controlled airflow or contactless methods to remove dust and debris. It integrates a flight platform with cleaning systems to maintain panel efficiency, reduce labor intensity, and support safe operations across rooftop, commercial, and utility-scale solar installations. The price of a Photovoltaic Cleaning Drone typically ranges from $1,000 to $11,000, with industry profit margins usually between 30% and 50%.

The upstream supply chain of photovoltaic cleaning drones consists of drone airframes, propulsion components, batteries, flight controllers, sensors, pumps, spray nozzles, and cleaning system assemblies supplied by drone component manufacturers, electronics producers, and specialized cleaning-equipment suppliers. Integration and final assembly are carried out by drone manufacturers who combine aeronautical systems with cleaning modules. The downstream supply chain includes distributors, drone solution providers, solar-farm maintenance contractors, photovoltaic plant operators, and service companies that use these drones for regular panel cleaning. The chain further extends to after-sales services such as maintenance, spare parts, training, and software upgrades to support long-term operational use.

United States market for Photovoltaic Cleaning Drone is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
