Photovoltaic DC fuse is a protective element specially used in photovoltaic power generation systems. It is mainly used in DC circuits to provide overcurrent protection for photovoltaic module arrays, combiner boxes, inverters and other equipment. Since the working voltage of the photovoltaic system is high and the current fluctuates, the fuse must have fast disconnection capability, high breaking capacity and high temperature resistance. This type of fuse usually complies with international standards such as IEC 60269-6 or UL 2579. It uses special fuse alloy materials and can cut off fault current within milliseconds to prevent the spread of fire, arc or system failure. Its typical structure includes ceramic tube shell, silver fuse, quartz sand filling medium, etc., with excellent arc extinguishing and heat dissipation capabilities. Photovoltaic DC fuses are widely used in household distributed photovoltaic systems, industrial and commercial photovoltaic power stations, and large ground power stations. They are often used in conjunction with DC circuit breakers and disconnectors to form a complete DC protection system.

United States market for Photovoltaic DC Fuse is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Photovoltaic DC Fuse is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
