## Abstracts

According to this study, the global Photovoltaic Decommissioning Service market size will reach US\$ 1723 million by 2031.

Photovoltaic Decommissioning Service refers to the provision of one-stop professional services ranging from technical evaluation, safe dismantling, classified transportation to environmental protection disposal and resource recovery for photovoltaic power generation equipment (such as photovoltaic modules, inverters, brackets, etc.) and their supporting facilities that have reached the end of their service life, are technologically outdated or need to be replaced. Its core is to ensure the efficient recycling and reuse of high-value materials such as glass, aluminum, silicon, copper, etc. in retired equipment through scientific planning and standardized operations, while avoiding environmental pollution caused by traditional treatment methods such as incineration or landfill, and ultimately promote the photovoltaic industry to form a circular economy system covering green design, standardized recycling, high-value utilization and harmless disposal.
