Photovoltaic Inverter Booster Integrated Equipment is a device that combines the functions of a photovoltaic (PV) booster and a PV inverter. A PV booster is a power

converter that increases the voltage output of a PV panel to match the input voltage of an inverter. A PV inverter is a power converter that transforms the direct current (DC) electricity generated by a PV panel into alternating current (AC) electricity that can be used by the grid or other loads. By integrating these two functions into one device, Photovoltaic Inverter Booster Integrated Equipment can improve the efficiency, reliability and flexibility of PV systems.

The upstream industry chain of Photovoltaic Inverter Booster Integrated Equipment consists of the suppliers of raw materials and components for the device, such as:

- Polysilicon, ingots, wafers, cells and modules for crystalline silicon PV technology
- Cadmium telluride, copper indium gallium selenide and other thin-film materials for thin-film PV technology
- Power semiconductors, such as MOSFETs, GaN HEMTs and SiC MOSFETs, for power conversion
- Transformers, capacitors, filters, controllers and other electronic components for power conditioning and control

The downstream industry chain of Photovoltaic Inverter Booster Integrated Equipment consists of the customers and end-users of the device, such as:

- PV system integrators and installers, who design, install and maintain PV systems for residential, commercial and utility-scale applications
- PV system owners and operators, who generate and consume or sell electricity from PV systems
- Grid operators and utilities, who manage the grid stability and power quality with PV systems as distributed energy resources
