The inductor in the photovoltaic inverter is an important electronic component, whose main function is to filter and stabilize the current in the circuit. The inductor resists the change of current through its self-inductance effect, thereby smoothing the pulsation or interference in the direct current (DC) power supply or alternating current (AC) power supply. In photovoltaic systems, inductors are often used to help reduce harmonics, noise and interference in the circuit, thereby improving the power quality and efficiency of the system.

The global Photovoltaic Inverter Inductor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
