The global Phycocyanin market size is predicted to grow from US\$ 85.8 million in 2025 to US\$ 209 million in 2031; it is expected to grow at a CAGR of 16.0% from 2025 to 2031.

Phycocyanin is a pigment-protein complex from the light-harvesting phycobiliprotein family, along with allophycocyanin and phycoerythrin. It is an accessory pigment to chlorophyll. All phycobiliproteins are water-soluble, so they cannot exist within the membrane like carotenoids can. Instead, phycobiliproteins aggregate to form clusters that adhere to the membrane called phycobilisomes. Phycocyanin is a characteristic light blue color, absorbing orange and red light, particularly near 620 nm (depending on which specific type it is), and emits fluorescence at about 650 nm (also depending on which type it is). Allophycocyanin absorbs and emits at longer wavelengths than phycocyanin C or phycocyanin R. Phycocyanins are found in Cyanobacteria (also called blue-green algae).

DIC, Parry Nutraceuticals, Nan Pao International Biotech, King Dnarmsa Spirulina and Zhejiang Binmei Biotechnology are the top 5 of global Phycocyanin, with about 74% market shares.
