The global Physiological Coolants market size is predicted to grow from US\$ 7.1 million in 2025 to US\$ 9.71 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

Physiological coolants offers unique odorless and flavorless cooling sensations which can be used alone or as a complement to menthol to help extend the cool fresh feeling in the final application, or in fruit flavors to enhance juiciness perception. The low volatility of these compounds allows for skin contact without a burning sensation in the eyes. In order to satisfy today's customers who demand specific sensory experiences, the need exists for physiological coolants to provide intense and memorable sensations.

Under the economic environment where dietary upgrades, olfactory consumption and beauty economy are prevalent, the demand for flavors and fragrances will be further promoted. The tobacco, alcohol and daily chemical industry will continue to prosper, and the upgrade of taste will promote the development of the flavors and fragrances market.
