Phytase when used as a feed enzyme is designed specifically to improve the availability of phosphorus from plant sources. Phytase is derived from a strain of *Pichia pastoris* through a proprietary cultivation and extraction technique. It can degrade phytic acid into inositol, or phosphoinositide and phosphoric acid. This product can eliminate the monogastric animal anti-nutrient action due to non-decomposition of phytic acid so as to improve the utility of nutrition. This enzyme also reduces the environmental pollution caused by the use of phosphorus.
