The global PID-Based Multigas Detectors market size is predicted to grow from US\$ 1174 million in 2025 to US\$ 1861 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

In 2025, global PID-Based Multigas Detectors production reached approximately 0.6 million units, with an average global market price of around US\$ 2000 per unit. Annual production capacity is 0.8 million units. Gross Profit Margin: 35%. PID-Based Multigas Detectors are portable or fixed gas detection devices that use Photoionization Detector (PID) technology in combination with other gas sensors to simultaneously detect volatile organic compounds (VOCs) and multiple toxic or combustible gases. The PID-based multigas detector industry chain includes upstream sensor and component suppliers, midstream manufacturers assembling and calibrating detectors, and downstream distributors and industrial end users in oil & gas, chemicals, environmental monitoring, and safety services. PID-based multigas detectors are valued for their high sensitivity to VOCs, fast response, and multi-gas coverage, making them a reliable safety tool in high-risk industrial environments.
