The global Piezo Chip Actuator market size is predicted to grow from US\$ 557 million in 2025 to US\$ 951 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

A piezo chip actuator is a micro-scale electromechanical device that exploits the piezoelectric effect. The Piezo Chip Actuator consists of multiple ceramic layers and electrode layers stacked and intersected internally, with external electrodes printed on both sides to lead out the internal electrodes. Through precision grinding processes, the height tolerance of each piezoelectric ceramic is controlled to be smaller than 25µm. When an electrical voltage is applied across its electrodes, the piezo chip undergoes precise and often tiny deformations, enabling it to generate forces and displacements. This actuator is widely used in applications demanding high precision at the micro or nano level, like in microelectronics, MEMS (Micro-Electro-Mechanical Systems), and biomedical devices due to its ability to provide accurate and controlled movements in a compact form factor.

United States market for Piezo Chip Actuator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
