Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The global Piezo Haptic Actuators market size is predicted to grow from US\$ 1011 million in 2025 to US\$ 2929 million in 2031; it is expected to grow at a CAGR of 19.4% from 2025 to 2031.

Piezo Haptic Actuators have irreplaceable technical advantages in local haptic feedback applications; in stylus pens and smart watches, they have very strong application prospects due to the advantages of small size, low power consumption and high vibration. It is currently unrealistic to replace LRA as the main tactile feedback engine in mobile phones, but as edge touch feedback, it provides a human-computer interaction interface outside the screen and enriches the touch experience of mobile phones. Piezoelectric haptic feedback will usher in more application opportunities in consumer electronics and wearable electronics.
