A piezo inkjet print head is a critical component in modern inkjet printers, used for precisely depositing ink onto a printing substrate, such as paper, fabric, or plastic. It employs piezoelectric technology to control and expel tiny droplets of ink onto the printing surface, enabling the creation of text, images, and graphics.

Continuous advancements in piezo technology have led to the development of print heads with even higher resolution capabilities. This trend allows for the production of sharper and more detailed images, which is particularly important for applications like photography and fine art printing.
