Piezoceramic Components refer to piezoceramic elements /components which are ceramic sheets that utilize the reversibility of the piezoelectric effect to apply an audio voltage thereon to cause mechanical vibration and sound. Piezoceramic Elements are specialized components made from piezoelectric materials, which have the unique property of generating electric charges when subjected to mechanical stress and vice versa. These elements are widely used in various applications, such as sensors, actuators, transducers, and ultrasound devices. In response to an applied electric field, piezoceramic elements can change shape or produce mechanical vibrations, making them essential in precise control and measurement systems across industries like electronics, medicine, and automotive engineering.

Global key piezoceramic components players include Kyocera, PI Ceramic GmbH and Johnson Matthey etc. The top 3 companies hold a share about 18%. Asia-Pacific is the largest market with a share about 40% followed by North America and Europe.

In terms of product, PZT-based product is the largest segment with a share about 70%. And in terms of applications, the largest application is industry and manufacturing with a share about 37%.
