The global Piezoelectric Devices market size is predicted to grow from US\$ 24700 million in 2025 to US\$ 29330 million in 2031; it is expected to grow at a CAGR of 2.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Piezoelectricity is the electric charge that gets collected in solid materials such as crystals or ceramics when a mechanical force is applied. Piezoelectric materials exhibit two properties: direct effect and converse effect. The phenomenon when the voltage gets induced after applying mechanical force is called direct effect, while the phenomenon of changing the crystal shape and dimensions after applying voltage is called converse effect.

APAC held the highest share in the global piezoelectric device market in 2017. Japan is involved in the researches on piezoelectric materials to a greater extent than any other country. In recent years, Japan has attempted to apply the piezoelectric technology for microscale applications. These attempts include the usage of piezoelectric technology in floors of train stations to generate electricity. Owing to these researches, the market in APAC is expected to grow at the highest rate in the coming years.
