The global Piezoelectric Drive Material market size is predicted to grow from US\$ 156 million in 2025 to US\$ 218 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Piezoelectric drive materials refer to materials that can change charge distribution and polarization strength under the action of an external electric field or mechanical stress. This material has unique physical properties, that is, it can generate charge under stress or deform under an electric field. Piezoelectric drive materials can realize the mutual conversion of electrical energy and mechanical energy. When an external force is applied, piezoelectric materials will produce charge separation, thereby generating voltage; conversely, when a voltage is applied, it will cause the size of the piezoelectric material to change and produce mechanical displacement.
