Piezoelectric shear element is an electronic component based on piezoelectric ceramic materials and using the shear effect of piezoelectric ceramics. It produces lateral displacement when voltage is applied to achieve high-precision tangential motion. The core structure of the piezoelectric shear element includes upper and lower electrodes, annular blade guards and cutting angles. The polarization direction of each layer of ceramic is orthogonal to the direction of the electric field. The lateral shear deformation is directly stimulated by electric field excitation and is used in precision instruments, industrial automation, quantum computing and other fields.

United States market for Piezoelectric Shear Element is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Piezoelectric Shear Element is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
