Piezoelectric shock wave therapy device is a medical device that uses the piezoelectric effect to generate shock waves. It is mainly used to treat orthopedics, rehabilitation, pain and other diseases. The working principle of the piezoelectric shock wave therapy device is to arrange hundreds of piezoelectric crystals on a concave surface. The external electric field changes the volume of the crystals to generate pressure waves and tension waves. After being collected by the ellipsoid, all the energy Focus on the treatment area. The advantages of piezoelectric shock wave therapy equipment are low noise, small focus, less clutter, strong stability, and light damage to tissues.
