Abstracts

The global Pig Farm Intelligent Management System market size is predicted to grow from US$ 471 million in 2025 to US$ 857 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

The pig farm intelligent management system is a digital platform based on the Internet of Things, big data and artificial intelligence technologies, which is used to monitor and manage the entire pig farming process in real time. It can automatically collect data on the growth, health, environment and other aspects of the pigs, intelligently analyze the feeding status, optimize key links such as feed feeding, disease warning, and reproduction management, improve farming efficiency, reduce costs, and realize traceable and visualized intelligent farming.

The market for pig farm intelligent management systems is primarily driven by the ongoing shift of the global swine industry toward large-scale, intensive, and digital operations. As large-scale breeding groups and modern pig farms continue to expand, the traditional model that relies on manual recording and experience-based management can no longer meet the needs of multi-site, batch, and refined operations. Breeding enterprises are increasingly demanding integrated systems that encompass production management, breeding management, precision feeding, environmental control, health monitoring, biosecurity, and cost analysis. Meanwhile, the persistent threat of animal diseases like African Swine Fever has heightened the focus on controlling personnel and vehicle access, anomaly alerts, traceability, and biosecurity management. Rising costs for feed, labor, and energy are also compelling enterprises to use digital systems to improve feed conversion ratios, sow productivity, and labor efficiency. Furthermore, the maturation of technologies such as RFID, electronic ear tags, automated weighing, machine vision, environmental sensors, cloud computing,

and AI has enabled individual pig identification, real-time data collection, disease early warning, and intelligent decision-making. This technological progress is driving the evolution of pig farm management systems from simple production-recording software into comprehensive, intelligent management platforms that interconnect equipment, data, and business decision-making.
