Pigment-based Digital Printing Ink is an ink used in digital inkjet printing that primarily consists of pigments. In pigment-based inks, pigment particles are suspended in a liquid medium rather than dissolved, which allows for stable image formation on various substrates. Compared to dye-based inks, pigment-based inks generally offer better lightfastness, water resistance, and durability, though they might be slightly less vibrant and expressive in color. These inks are widely used in applications requiring high durability and high-quality imagery, such as signage, art prints, and packaging printing.

The global Pigment-based Digital Printing Inks market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
