The global Pigments for Automotive Coatings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

There are various types of pigments used in coatings, including inorganic pigments and organic pigments. Inorganic pigments are mainly made from natural minerals or artificially synthesized inorganic compounds, which have excellent light resistance, weather resistance, chemical corrosion resistance, as well as high covering and coloring power. Organic pigments are mainly obtained from plants, marine animals, or chemical synthesis, and have bright colors and good coloring power. However, compared to inorganic pigments, organic pigments typically have poorer light resistance, weather resistance, and chemical corrosion resistance.
