Pilot controlled lighting refers to a system where pilots can independently control the lighting at an airport or airfield. It allows pilots to activate and adjust runway lights, taxiway lights, and other lighting elements using a dedicated radio frequency or other communication methods. The system typically consists of a control panel or transmitter located in the pilot's cockpit, which sends signals to activate the desired lighting configuration. Pilot controlled lighting provides pilots with enhanced control and flexibility for lighting conditions during takeoff, landing, and ground operations, improving safety and visibility.
