Pilot Plant is a highly flexible modular system designed for testing a variety of applications. Pilot production refers to a process in which a series of process researches are completed in the laboratory and the process of process amplification research is carried out under conditions that are basically consistent with production. It is a necessary link for the transformation of scientific and technological achievements into productivity. Pilot plants are easy to scale-up and give you the opportunity to process small-scale samples under exactly the same conditions as those generated in large-scale production facilities. As an example, it is designed to use Ammonia or Freon as the refrigerant for fat crystallization.
