Pimozide (sold under the brand name Orap) is an antipsychotic drug of the diphenylbutylpiperidine class. It was discovered at Janssen Pharmaceutica in 1963. It has a high potency compared to chlorpromazine (ratio 50-70:1). On a weight basis it is even more potent than haloperidol. It also has special neurologic indications for Tourette syndrome and resistant tics. The side effects include akathisia, tardive dyskinesia, and, more rarely, neuroleptic malignant syndrome and prolongation of the QT interval.

The Pimozide Tablet market has evolved as a prescription medication used to treat various psychiatric disorders, including schizophrenia and Tourette's syndrome. Pimozide is an antipsychotic medication that helps regulate certain chemicals in the brain to alleviate symptoms such as hallucinations, delusions, and repetitive behaviors.
