Pin fin heat sinks are compact sinks that are fabricated with a large number of pins created to dissipate heat out into the surrounding air.

Pin fin heat sinks are compact sinks that are fabricated with a large number of pins created to dissipate heat out into the surrounding air. These heat sinks are designed and structured geometrically to make them highly effective. A heat sink is typically a solid block of copper or aluminum with multiple fins that increase the available surface area for heat transfer. Pin fins simultaneously increase both the heat transfer surface area and the heat transfer coefficient.
