The global Pinhole Inspection Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A pinhole inspection unit is a machine that inspects packaging materials for pinholes. A pinhole is a hole the size of a needle in a packaging material, or a very small hole on a painted surface of an exterior wall after construction, as if an air bubble has collapsed.

The characteristics of pinholes are that they can be inspected in a nondestructive state, which facilitates re-inspection and pursuit of the cause of defects, and that they can be inspected even when bubbles are present in the product. There are also pinhole inspection units that can even pinpoint the location of pinholes.
