A pipe clamp temperature sensor is a type of sensor device used to measure the temperature of pipes or pipelines. It is designed to be clamped or attached to the surface of the pipe, allowing for temperature measurement without the need for drilling or damaging the integrity of the pipe. A pipe clamp temperature sensor typically consists of a sensor head and a clamping mechanism. The sensor head contains the temperature sensing element, which measures the temperature in contact with the surface of the pipe. The clamping mechanism is used to securely attach the sensor head to the pipe surface, ensuring good contact between the sensor and the pipe to obtain accurate temperature measurements.
