The global Pipe Laser Cleaning Equipment market size is predicted to grow from US$ 635 million in 2025 to US$ 895 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Pipe laser cleaning equipment is a professional equipment that uses high-energy laser beams to perform non-contact cleaning on the inner or outer wall of pipes. Its principle is based on the interaction effect between laser and matter. Through the irradiation of high-energy beams of specific wavelengths, dirt, rust, oxide layers, paint or coatings on the surface of the pipe are instantly evaporated or peeled off, forming a rapidly expanding plasma and generating shock waves, thereby separating pollutants from the surface of the substrate to achieve the purpose of efficient cleaning. The equipment can be configured with a rotatable cleaning head or a moving slide platform for different pipe diameters (such as 80mm-250mm small pipe diameter or 480mm-1500mm large pipe diameter). By adjusting the laser parameters, environmentally friendly cleaning without chemical reagents and waste residues can be achieved. It is especially suitable for industrial scenarios with strict cleanliness requirements such as nuclear power plant reactor pipelines and ship pipelines.

United States market for Pipe Laser Cleaning Equipment is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
