Pipe sound insulation wrapping material is a special material used to reduce the noise generated by pipelines during operation. It is widely used in construction, industry, home and other fields. This type of material is usually composed of a multi-layer composite structure, including a sound absorption layer, a sound insulation layer and a vibration reduction layer. The main materials are rubber, glass fiber, rock wool, polyethylene foam, etc. It can effectively reduce the propagation of noise caused by liquid flow, gas transportation or mechanical vibration, and has the characteristics of moisture resistance, corrosion resistance, and high temperature resistance. It can not only improve the environmental noise problem, but also improve energy utilization efficiency. It is an important auxiliary material for realizing modern low-noise and environmentally friendly pipeline projects.
