Nosocomial or hospital acquired infections have created numerous complications for patients in hospitals throughout the world, as these infections are caused by multidrug resistant microorganisms, the recuperation of a patient is drastically reduced and accompanied by several comorbidities. Being multidrug resistant, these organisms are immune to the conventional antibiotics hence difficult to treat. Pneumonia is one of the prominent infections caused in hospital premises. Cases of hospital acquired pneumonia are common in immunocompromised patients, post surgical infections, enteral feeding, elderly and infant patients. As hospital acquired pneumonia is mainly caused as a result of prolonged exposure to ventilator air, it is also called as ventilator associated pneumonia. Major causative pathogens include methicillin resistant *S. aureus* (MRSA), multi drug resistant (MDR) *P. aeruginosa*, *Klebsiella* and *Acinetobacter*. Respiratory Syncytial Virus (RSV) has also been found to be a major causative agent of nosocomial pneumonia in new borne.
